The valves' technical design is based on media and application requirements. This can lead to deviations from the general specifications shown on the data sheet regarding the design, sealing materials, and characteristics.

If order or application specifications are incomplete or imprecise there exists a risk of an incorrect technical design of the valve for the required application. As a consequence, the physical and/or chemical properties of the materials or seals used, may not be suitable for the intended application.

Above stated body materials refer to the valve port connections that get in contact with the media only!
**type FK 65**

**function:** NC  
Closed when not energized

**function:** NO  
Open when not energized
